

1. Write a C++ program to create a file called File1.txt and print its contents in the reverse order to the File2.txt.

```
#include <iostream>
#include<string.h>
#include<fstream>

using namespace std;

int main(){
char str[1000],st[1000];

ifstream in("sample.txt");
    ofstream out("sample2.txt");

    while (!in.eof())
    {
        in.getline(st,1000);

        strcat (str, st);

        strcat(str,"\n");
    }
    in.close(); strrev(str);

    out<<str<<end;

    out.close();

    return 0;
}
```

OUTPUT
